When **acoustics** become **decoration**.

In the exciting world of interior design, acoustics is an aspect that is often overlooked, but is nonetheless essential. Imagine a space that is not only visually captivating, but also envelops your senses in a cocoon of tranquillity and well-being. This is where acoustic decoration comes into its own.

Step into this captivating world with Tecsound®, your partner in enhancing your living spaces. Explore a diverse range in which creativity merges with technical expertise. Products range from customised acoustic panels to bespoke prints, innovative acoustic globes, green acoustic panels, islands and baffles in different materials, **Tecsound®** pushes the boundaries in terms of aesthetics and acoustic performance. Each product embodies a perfect blend of functionality and elegance, creating a harmonious balance between practicality and sophistication for all your spaces.

Tecsound® stands out as the perfect fusion between the cutting-edge expertise of an acoustic specialist and the ingenuity of a manufacturer of made-to-measure solutions. As heir to the **SOPREMA** group, a family-owned company founded in 1908, **Tecsound®** has been perfecting its technical and design skills for more than 20 years in preparation for the acoustic challenges of the spaces of the future.

Tecsound® invites you to rediscover well-being within your own home. Its sound-absorption solutions create a calm environment where noise fades into the background, creating space for serenity and relaxation.

Be inspired by the lifestyle encapsulated by Tecsound®, where every detail is designed to awaken your senses and enhance your home. With **Tecsound®**, beauty and well-being combine to create enchanting, inspiring spaces where life takes on its full meaning.

_WHAT IS ACOUSTIC DECORATION?

ACOUSTICS IS A MAJOR CONCERN FOR THE FRENCH

NOISE IS ONE OF THE MAIN SOURCES OF DISTURBANCE. NOISE TRAVELS AROUND A BUILDING THROUGH INTERIOR SPACES, THE MATERIALS USED, OPENINGS AND THE STRUCTURE OF THE PREMISES.

Acoustic comfort is an **essential element in a building's performance**. Acoustics is a major concern for the French. According to an Epos study (2020), 95 % of workers have experienced a decline in their concentration and efficiency at work due to noise ¹. An IFOP survey has also revealed that 70 % of people questioned feel stressed by noise in their home and outside the workplace ².

There are strict regulations in France **that govern the noise levels permitted in public spaces**, particularly in hotels and restaurants. These standards are crucial for guaranteeing the comfort and safety of customers.

Excessive noise can have a major impact on customer experience in these establishments, affecting their comfort and overall enjoyment.

¹ www.bruit.fr - Understanding Sound Experiences, Epos, 2020

² IFOP-JNA - Bruit et santé, 2022

³ www.se-unsat.org

⁴ Ecophon, 2020

_ The economic impact of acoustics

From an economic point of view, poor acoustic insulation can reduce the value of a property exposed to neighbourhood noise by 10% to 20%. The sound environment in public places is as crucial as the quality of a meal in a restaurant. 65% of French people have decided against a restaurant because of the noise ⁴.

In response to these challenges, it is essential **to incorporate acoustic considerations right from the design phase** and to **choose appropriate materials for effective insulation**.

This is where acoustic decoration comes in. Acoustic decoration subtly combines **aesthetics and functionality** offering a range of solutions for controlling the acoustics in a space while adding a touch of style. Each product proposed by **Tecsound®** is designed to provide **a comprehensive solution** in response to your specific needs.

– Tecsound®, the acoustics expert

With over 20 years of expertise in building acoustics, **Tecsound®** has developed solutions to deal with noise pollution. Thanks to its technical know-how, **Tecsound®** is also developing **acoustic decoration solutions**.

All the acoustic solutions offered by **Tecsound®** are COFRAC certified, giving them a performance guarantee from this qualified external body. Some solutions **reduce sound transmission between two partitions by over 50%** (attenuation by up to 13 dB). Others are designed to **attenuate sound reverberation in spaces with strong echoes** thereby improving intelligibility in these areas.

Acoustic decoration is an essential element in all interior design projects and **Tecsound®** offers innovative solutions which **improve the sound environment** and blend harmoniously with the overall design of the premises.

As a trusted partner, **Tecsound®** creates functional, pleasant interior spaces **with outstanding acoustic performance**.

– How to integrate acoustic decoration in your new or renovation projects

Whether you are involved in a new innovative project or a refreshing renovation, the integration of acoustic solutions can change **the atmosphere of your living space considerably**.

For example, imagine a living room where every conversation is pleasant and free-flowing, or an office where calm prevails. So how can you skilfully integrate acoustic decoration into your projects? It all starts by gaining thorough understanding of your customers' needs and the specific characteristics of each space. Then you can use your creativity and expertise to choose **the ideal solutions, combining aesthetic perfection with acoustic performance**.

For new projects, consider incorporating **architectural elements that promote excellent acoustics**, such as perforated suspended ceilings or absorbent floor coverings, right from the design phase. For renovations, **opt for more discreet solutions** such as acoustic curtains or self-supporting decorative panels that can be installed without changing the existing design.

Integrating acoustic decoration in your projects is about much more than a simple functional necessity. **It is a unique opportunity to create cosy, warm spaces**. It is a subtle art of merging **aesthetics with comfort** to offer your customers truly harmonious environments in which every detail contributes to an unforgettable sensory experience.

– Interior design: your customers are sensitive to it

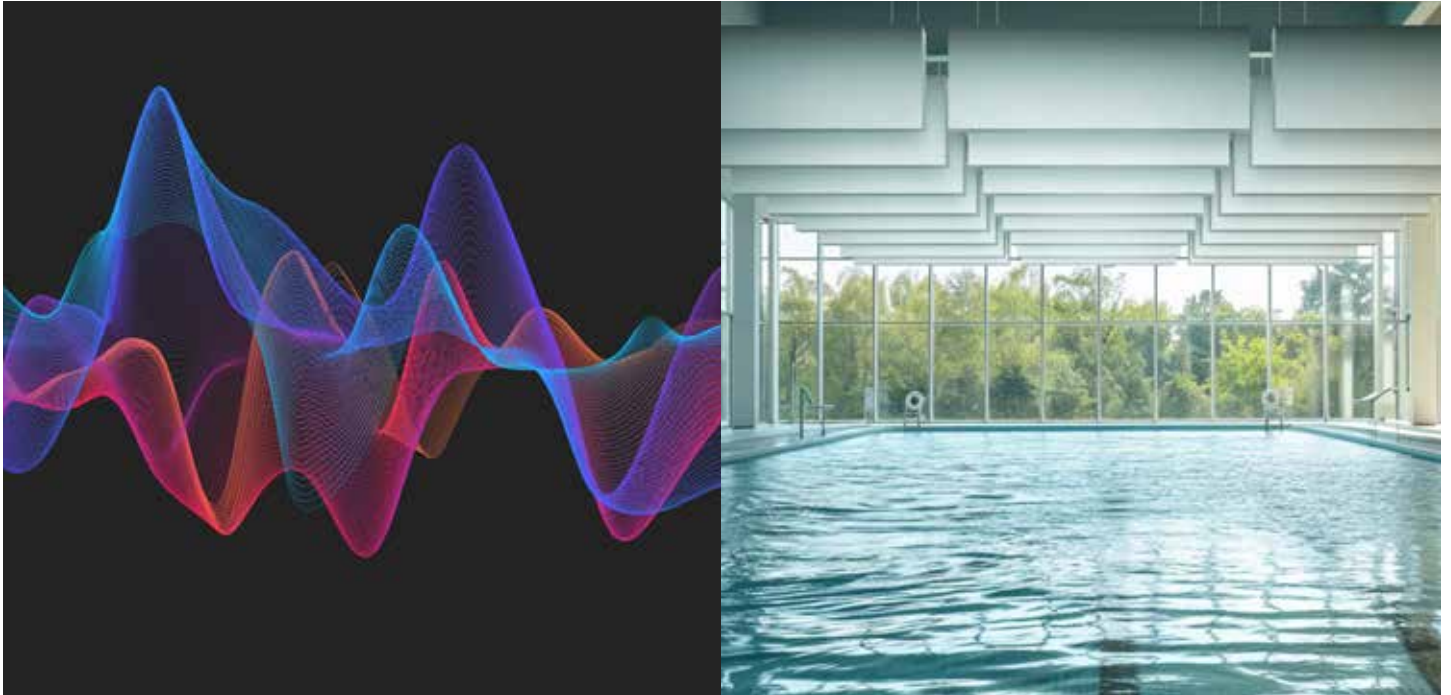

In the world of interior design, every detail counts. In a world where aesthetics merge with comfort, your customer are more sensitive than every to the art of creating **spaces that reflect their personality and fulfil their needs**.

As interior design professionals, you have the power to make their dreams come true. You are the creators of their universe. Through your deep understanding of their aspirations and the expertise that you offer in bringing their vision to life, you create spaces that delight and inspire them.

Decoration awakens the senses and arouses the emotions. Your customers are more sensitive than ever to spaces that reflect their personality and fulfil their needs. The home is much more than simply a place to live when aesthetics combine with comfort and design incorporates functionality.

OUR ACOUSTIC SOLUTIONS

ACOUSTIC PRINCIPLES EXPLAINED IN LAYMAN'S TERMS

Sounds play a major role in our interiors, but they are not always welcome. Noise pollution can be divided into three distinct categories:

Airborne noise: This type of sound travels through the air, such as traffic noise or neighbours' voices. Depending on the materials used, these sounds can travel through walls and partitions.

Impact noise: These sounds are transmitted through the building's structure and are caused by vibrations or impacts, such as the sound of objects falling to the ground or doors slamming. They reverberate through our spaces due to their direct contact with surfaces.

Equipment noise: These sounds come from the machines and devices present in our spaces. From the humming of fans to the intermittent noise of household appliances, their intensity can vary depending on the type of equipment and the distance.

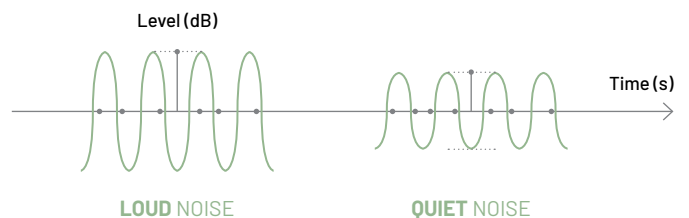

To sum up, airborne noise travels, impact noise interacts with surfaces and equipment noise comes from our indoor equipment.

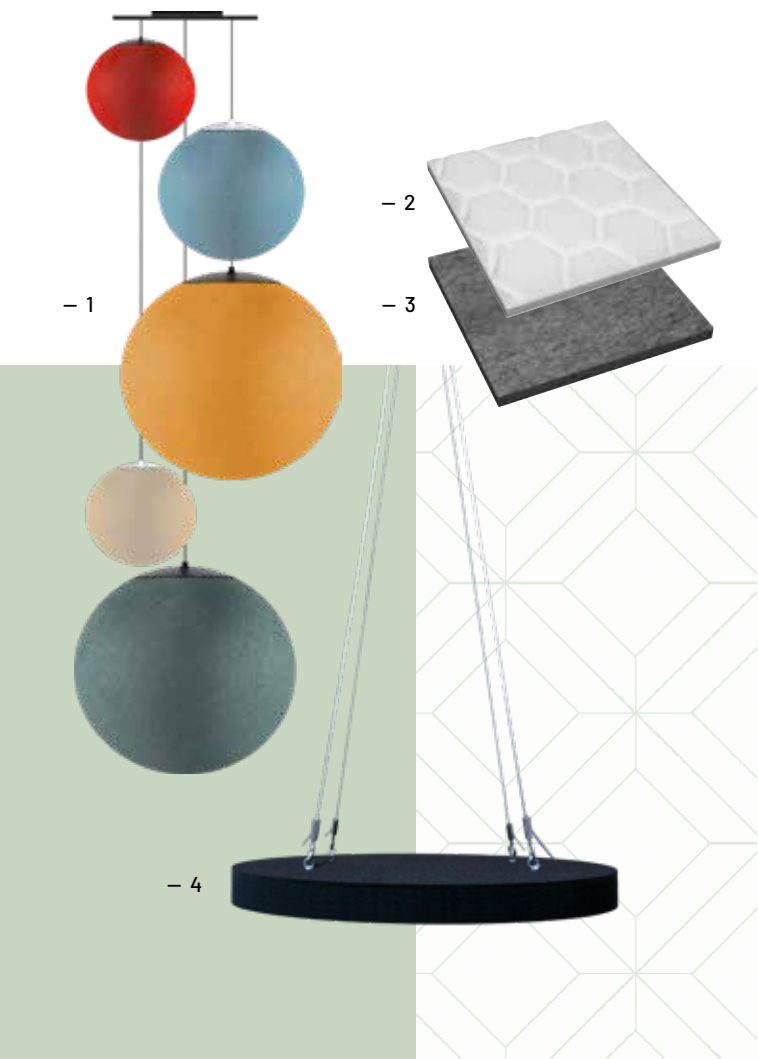

Understanding the different types of noise helps us to offer appropriate solutions to enhance our acoustic comfort and transform our spaces into havens of sonic peace.

Acoustic correction is intended to improve the sound quality inside a specific space. A number of approaches can be used in order to achieve this aim.

Once the type of noise has been identified, various methods can be adopted. For example, the use of absorbent materials such as baffles or specially designed panels made from polyester fibres can be extremely effective. These materials act as sponges, absorbing sounds and thus reducing reverberation.

Acoustic correction can also be achieved by reorganising the layout of the space to improve sound diffusion.

_ HOW THE SOLUTIONS WORK

On the surface, our acoustic decoration solutions appear simply to be decorative elements, with our green panels, hanging coloured globes, works of art adorning the walls. However, their value extends far beyond their aesthetic appeal.

Designed to **improve the acoustics in your spaces**, these creations are based on **the principle of sound absorption**. Our solutions, made from materials such as melamine, polyester fibres and wood wool, **capture unwanted sound and reduce reverberation** to create a peaceful, comfortable environment.

Our approach is about much more than simple aesthetics: it aims to **optimise acoustic comfort and enhance day-to-day well-being** in your living spaces.

You can transform all your rooms into a haven of sonic peace, where the harmonious combination of **design and functionality** creates an **unrivalled sensory experience**.

— ELEGANT SOLUTIONS FOR ALL SPACES AND ALL STYLES

Discover our **DecoKustik** range, designed to be adapted to any environment, with products that combine style with functionality.

Whether you opt for **BAB**, **PureKustik Art**, **Tecsound Studio** or **PureKustik Sweet Green**, every solution can be fully customised and offers excellent acoustic properties.

Thanks to their special composition, the **PureKustik** products are specially designed for damp environments such as spas, swimming pools and kitchens.

Our solutions are ideal for a whole range of spaces from hotel foyers to cafés, bars, restaurants, waiting rooms, public-access buildings and offices. Transform your space with effective, aesthetic acoustic solutions to suit all requirements and all styles.

_DESIGN OFFICE

A **team of passionate experts** who will consider all your needs **down to the last detail.**

Our specialists are committed to complying scrupulously with the standards in force and will go above and beyond to fulfil your needs in terms of comfort, guaranteeing optimum compliance that will exceed all your expectations.

We are committed to supporting you every step of the way thanks to:

- **Cutting-edge expertise**
Our team is made up of qualified professionals who are specialists in their field.
- **Compliance with standards**
We guarantee strict compliance with the regulatory standards in force as well as our own strict technical standards.
- **Innovations**
We offer you innovative, effective solutions in order to face the complex challenges linked to current acoustic constraints.
- **Quality, reliability and precision**
The quality of our studies and calculations is impeccable, and an indispensable factor in the success of your projects.
- **Optimisation of costs**
We identify inefficiencies and propose practical solutions to maximise your investments.
- **Customisation and adaptation**
We offer you made-to-measure solutions as a perfect response to your specific needs.

Our experts will support you every step of the way in your project, using their skills to help you to fulfil your goals.

Thanks to our on-line acoustic calculator on the site www.tecsound.fr, we are able to configure made-to-measure solutions adapted to each project.

_ Case study

Our involvement from the very start of the project with the Galopin restaurant in Paris, was helpful for the owner both in terms of cost and for the harmonious integration of our solutions in the existing décor. The need for acoustic comfort in certain specific areas of the restaurant was quickly identified as a way of enhancing customers' well-being. We carried out a preliminary acoustic study in close cooperation with the architects, which enabled us to integrate made-to-measure acoustic solutions and tailor them to the restaurant's specific needs, while maintaining the desired atmosphere for the space.

→ **Tecsound Studio**, shapes and colours to order.

_CUSTOMISATION

The **DécoKustik** collection harnesses **our creativity** to enhance **your identity**.

Our customised solutions free you from standards and constraints and allow you to express your personality. Bring a sense of movement to your spaces and express your uniqueness through decorations in sculptural, organic, colourful shapes.

_ Wide range of colours

Our acoustic decoration solutions can be adapted to your interiors offering a **huge range of colours**. Some offer **up to 65 different shades**, while others allow for **customised printing**.

_ Cut to measure

Our approach is based on the assumption that **every space is unique**. This is why we offer a **made-to-measure cutting** service to ensure that our panels can adapt perfectly to your specific needs and blend harmoniously with your environment.

New - as an option: Promotion of your company logo by integrating neon in your **PureKustik Sweet Green panels** !

_Customised print

Whether you are wanting to express your brand identity or add an artistic dimension, customised printing enriches your interiors **by creating a unique atmosphere**.

This aesthetic, functional solution allows you to express your creativity while improving the acoustic comfort of your spaces.

_ Adaptable products

Our acoustic decoration solutions **are fully customisable and are designed to meet your particular needs**. You are free to create your own arrangements! You can choose from a wide range of product combinations and a variety of finishes. Let your creativity run wild!

AESTHETICS

BAB Acoustics & BAB Lighting

— pages 18 → 19

Immerse yourself in the innovative world of **BAB, Beautiful Acoustic Ball**, the global benchmark for spherical acoustic solutions that redefines both the aesthetics and the functionality of your interiors.

BAB Acoustics is notable for its infinitely modular globe design. It attaches to the ceiling and provides remarkable sound attenuation by trapping sounds in its filler foam, which enhances comfort and the clarity of conversations in the space.

Each **BAB** is made from decorative, flame-retardant, hand-woven fabric and is available in a range of designs:

Four sizes of globe, to adapt to different sized spaces,

- Three holder finishes adding an extra touch of sophistication,
- Twenty colours for perfect harmony with your décor,
- Three cable options for discreet or bold integration.

You can also explore our complementary range of light fittings, **BAB Lighting**, which are designed to add an extra aesthetic touch to your environment. You can combine the two types of globe to add a playful touch to your lighting décor while optimising the acoustics in your spaces.

BAB Acoustics and **BAB Lighting** will allow you to express your creativity and create acoustic solutions that not only transform the sound environment of your spaces, but also add a unique aesthetic dimension. Every detail counts when creating a real sonic work of art with **BAB**.

PureKustik Art

— pages 20 → 21

Transform your spaces with our custom-printed acoustic panels: an example of acoustic art par excellence.

Find the perfect solution to enhance sound environments with style and efficiency. Our custom-printed acoustic panels effectively capture sound to improve the acoustic comfort of your spaces.

PureKustik Art does not simply transform acoustics, it also integrates art in your décor, creating visual and sonic harmony. Made from 60% recycled polyester fibres and printed with the HD image of your choice. Bring acoustic art into your spaces and let it blend elegantly into your décor.

PureKustik Art is made from 60% recycled polyester fibres (PET) obtained from recycled plastic bottles, creating an exceptionally durable material. Here's why you will love it:

- **Fire resistant:** Classified B-s1,d0, it guarantees optimum safety.
- **Moisture-resistant:** Ideal for damp environments such as swimming pools and professional kitchens.

PureKustik Sweet Green

— pages 22 → 23

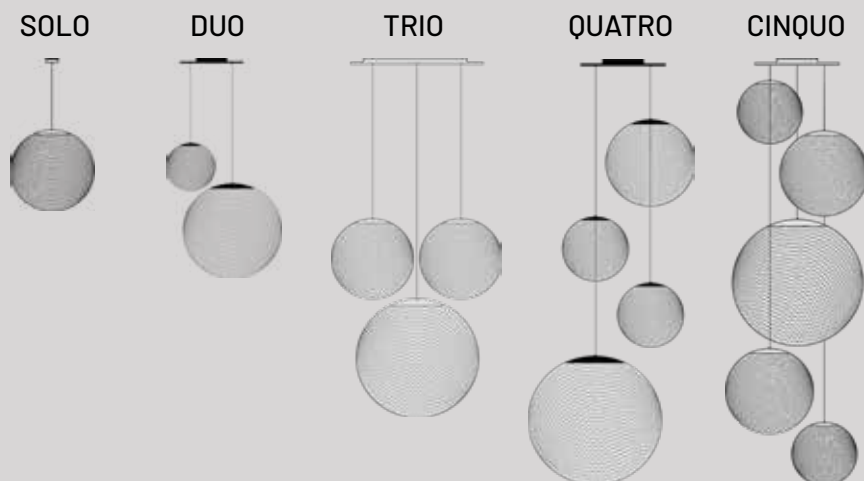

Invite nature and tranquillity into your home! Our acoustic solutions are also embellished with plants, adding a sophisticated touch to any environment to create a soothing and comforting space. These green panels are light and easy to maintain and offer timeless beauty without involving any compromise or extra effort.

PureKustik Sweet Green is extremely fire-resistant and is classified as B-s1,d0 guaranteeing optimum safety.

DECOKUSTIK

_WHAT YOU SAY

François Fournier

General Manager
of Mercure hotel
Aix en Provence

— How would you describe your space before you used our acoustic decoration products?

The space used to be aesthetically cold as the room was completely white. The breakfast room can accommodate up to 45 people and when it was full it was unpleasant because of the commotion caused by all the noise (customers chatting, coffee machine vibrating or pouring, kettle boiling, etc.). The ceiling in the room is vaulted and supported by pillars.

Because of this unusual shape, acoustic islands were awkward to use. The ceiling was also too low to use acoustic baffles.

— How did you first get in touch with Tecsound?

We made an appointment with **Tecsound** at the HR Meeting in 2023 to discuss sound reverberation problems in the dining room. Since then, **BAB** have been installed to alleviate this

problem. Everything went really smoothly. Customer relations were good, the price was fair, the ceiling installation was simple and the result was amazing.

— Did you have any specific criteria in mind when choosing our products?

Before we came across **Tecsound**, we had only contacted one company who had offered an unsuitable solution for the problem described. The company suggested using various acoustic totems that would be placed on the ground. As the dining room is sometimes rearranged, having to move these totems around seemed too restrictive. Particularly as customers could have knocked them over. And the price was too high. Our decision was therefore made above all on the basis of practicality and price.

— How was it when our acoustic panels were installed?

The **BAB** were quick and easy to install.

— Can you describe how the sound quality of your space has changed?

The difference is incredible. Customers can now enjoy a calm environment without all the commotion. The breakfast area is now a peaceful space where people can start their day calmly. Repeat customers have highlighted the positive transformation in the décor brought about by the 25 different-coloured acoustic globes in various sizes. The globes are beautiful - they create warmth in what was originally a white space.

— Have you noticed an improvement in your well-being since the installation?

We now have a warm and peaceful breakfast room. New customers haven't commented, but we know this something they must value subconsciously.

Claire Schmidt

Head of the works and development department of the Ministry of National Education

What type of problems were you facing?

With its brick walls, PVC floor and high ceilings, staff were finding it difficult to work in this space because of resonance problems. An interpreter works with the department at conferences and other events. It was often difficult to concentrate on their voice due to the resonance and diffusion of background noise.

How did you first get in touch with Tecsound?

The Ministry commissioned an architect to address our acoustic problems. This space, which is known as the 'Lab', was built a few years earlier and these problems were meant to be resolved by renovation work.

The architect put his clients onto **BAB** which provide acoustic comfort with a decorative touch. Ludovic probably suggested several solutions to the architect, including this one. He also worked with the architect on the layout.

What convinced you to opt for our acoustic solutions?

The architect **BAB** right from the start. So they only had one option, and it turned out to be the right one. No specific criteria were put forward, apart from the fact that some solutions would be difficult to implement and that video projectors, posters and displays are often hung on the walls. The solution would have to take these things into account.

Did you find the process simple and accessible?

The solution was easy, clean and quick to install. The customer came up against a problem during installation. Some of the larger **BAB** would not stay up. Because they were heavier than other products **Tecsound**® added magnets to hold them in place. The problem was solved quickly and efficiently.

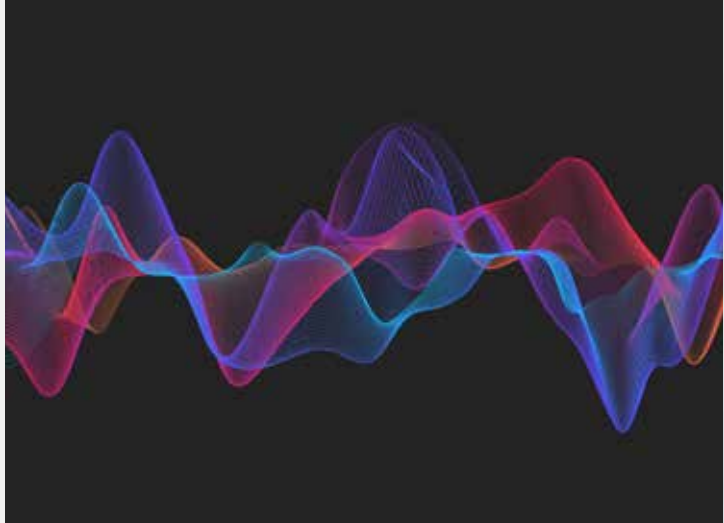

What changes did you notice after the installation?

The employees are very happy and their quality of work has improved. This is particularly true for the interpreter. The atmosphere and conversations are softer, there is much less resonance in the space and working conditions have been significantly improved.

The **BAB** have had an impact on the acoustics in the room but also on its appearance. The 'Lab' now has a strong visual identity. When employees are communicating by video, the callers recognise the location thanks to the **BAB** that can be seen in the background. The **BAB** add a touch of playfulness and bring the room to life with the 3D effects that wall panels could not create. They are fun and ideal for the Ministry of Education.

How would you describe the general atmosphere of your interior now?

It has definitely become more comfortable since the installation of the **BAB**. The sound is more subdued even with the high ceilings. The atmosphere is more pleasant and cosy, but still airy. The **BAB** have reduced resonance while maintaining the space and its high ceilings. It is a professional, stylish solution which means that the room can be used in either a professional or recreational context. It is a simple solution, but one with great technical potential.

— Tecsound®

A DEDICATED TEAM
FROM DESIGN TO CONSULTANCY
AND SALES

The **SOPREMA** group's acoustics experts, **Tecsound®** offer a comprehensive range of high-performance, customisable solutions for construction and industry, with solutions to guarantee day-to-day comfort.

For 20 years, **Tecsound®** has been promoting acoustic performance by judiciously building up a wide offering of acoustic materials and products manufactured by the company itself. **Tecsound®** has the acoustic expertise to guarantee day-to-day comfort in homes and workplaces.

Tecsound® offers a wide range of integrated and customised acoustic insulation solutions for construction and industry. They guarantee **high performance** whilst also **simplifying installation processes**.
